# ESP8266 SDK

# **Getting Started Guide**

# **About This Guide**

This document takes ESP-LAUNCHER and ESP-WROOM-02 as examples to introduce how to use the ESP8266 SDK V2.X and earlier versions. The contents include preparations before compilation, SDK compilation and firmware download.

For the new ESP8266\_RTOS\_SDK (ESP-IDF style) V3.0 and later versions, please see *ESP8266\_RTOS\_SDK/docs*.

### **Release Notes**

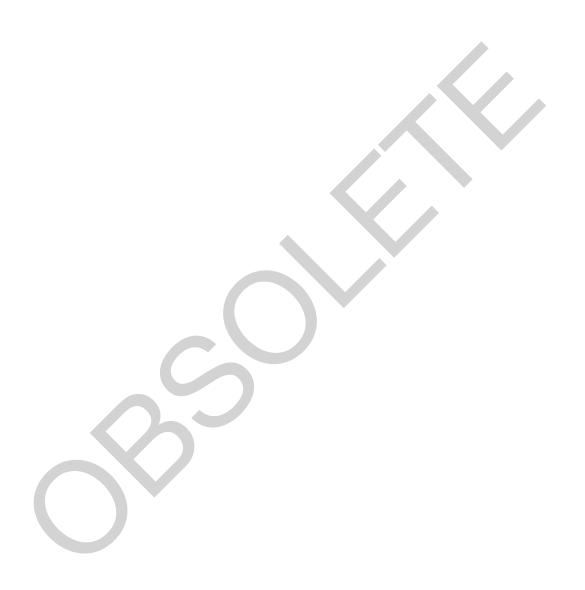

2016.04 V2.0 First release.  2016.07 V2.1 Added MXIC Flash QIO mode; Modified the default value of byte 112 to 0.  2016.07 V2.2 Updated Section 3.3,1.	
2016.07 V2.1 Modified the default value of byte 112 to 0.	
2016.07 V2.2 Updated Section 3.3,1.	
2016.08 V2.3 Updated the Baidu link in Section 3.3.1.	
2016.10 V2.4 Updated the flash address of <i>eagle.irom0.text.bin</i> in Section	1 4.1.1.
2016.11 V2.5 Added Appendix B—Learning Resources.	
Modified the default value of byte 113 to 0 in Table 6-6.  2017.01 V2.6 Added two Github links of RTOS and non-OS SDK sample of Appendix B.2—Must-Have Resources.	ode in
Updated sections 3.1 and 3.2; 2017.02 V2.7 Updated the link for the OVA image file in section 3.3.1; Updated Section 5.1.2.	
2017.05 V2.8 Updated Chapter 4 for 8 MB and 16 MB flash support.	
Updated Table 1-1 in Chapter 1; Updated Figure 4-1 and the parameter descriptions in Chapte Updated Table 4-1, Table 4-2, Table 4-3 and Table 4-4 in Cha	,
Updated section 4.1.1; Updated Table 4-1 in Chapter 4.	
2018.06 V3.1 Updated Table 4-3 in Chapter 4.2.1.	
Updated the description in Appendix A; Updated the document format.	
2019.12 V3.3 Updated the description of ESP8266_RTOS_SDK (ESP-IDF s V3.0 and later versions in About this Guide.	style)
2020.09 V3.4 Removed section 6.3; Removed some obsolete links.	
2022.08 V3.5 Obsoleted.	

# **Documentation Change Notification**

Espressif provides email notifications to keep customers updated on changes to technical documentation. Please subscribe at <a href="https://www.espressif.com/en/subscribe">https://www.espressif.com/en/subscribe</a>.

### Certification

Download certificates for Espressif products from <a href="https://www.espressif.com/en/certificates">https://www.espressif.com/en/certificates</a>.

# 1.

# **Overview**

# 1.1. Procedure Overview

Figure 1-1 shows the overall procedure of the SDK compilation.

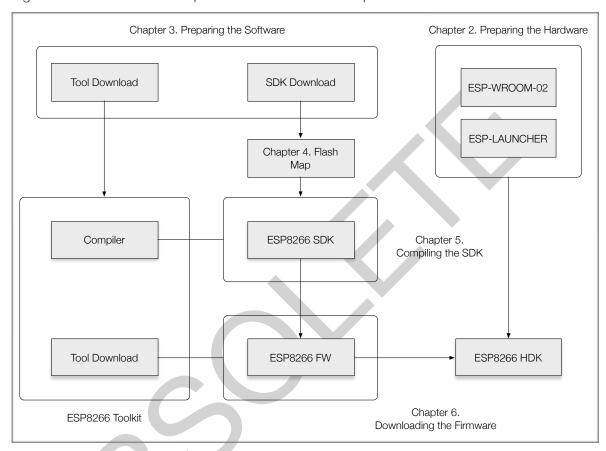

Figure 1-1 Procedure Overview

# 1.2. ESP8266 HDK

The ESP8266 HDK (Hardware Development Kit) includes the chip—ESP8266EX, the module—ESP-WROOM-02 and the development board—ESP-LAUNCHER. Users can download the pre-compiled firmware using ESP-WROOM-02 or ESP-LAUNCHER.

#### Notes:

- If users use other development boards or modules that integrate ESP8266EX, please use the development firmware provided by the corresponding manufacturers.
- If users would like to purchase ESP-WROOM-02 or ESP-LAUNCHER, please visit Espressif's official online store at: <a href="https://espressif.taobao.com">https://espressif.taobao.com</a>,

# 1.3. ESP8266 SDK

The ESP8266 Software Development Kit (SDK) is an Internet of Things (IoT) application development platform developed by Espressif for developers. It includes such examples of application development as Smart Lights and Smart Plugs.

Depending on whether they are based on an operating system (OS), SDKs can be categorized into two types: Non-OS SDK and RTOS SDK.

#### 1.3.1. Non-OS SDK

Non-OS SDK is not based on an operating system. It supports the compilation of IOT\_Demo and AT commands. Non-OS SDK uses timers and callbacks as the main way to perform various functions such as nested events and functions triggered by certain conditions. Non-OS SDK uses the espconn network interface; users need to develop their software according to usage rules of the espconn interface.

#### 1.3.2. RTOS SDK

RTOS SDK is based on FreeRTOS, open-source software development on Github.

- The FreeRTOS SDK is based on FreeRTOS, a multi-tasking OS. Users can use standard interfaces to realize resource management, recycling operations, execution delays, inter-task messaging and synchronization, and other task-oriented process design approaches. For the specifics of interface methods, please refer to the official website of FreeRTOS or USING THE FreeRTOS REAL TIME KERNEL—A Practical Guide
- The network operation interface in RTOS SDK is the standard IwIP API. RTOS SDK provides a package which enables a BSD Socket API interface. Users can directly use the socket API to develop software applications; and port to ESP8266 other applications from other platforms using the socket API, effectively reducing the learning costs arising from switching platforms.
- RTOS SDK introduces cJSON library whose functions make it easier to parse JSON packets.
- RTOS is compatible with non-OS SDK in Wi-Fi interfaces, SmartConfig interfaces, Sniffer related interfaces, system interfaces, timer interfaces, FOTA interfaces and peripheral driver interfaces, but does not support AT implementation.

# 1.4. ESP8266 FW

ESP8266 FW (Firmware) has been provided in binary format files (.BIN) that can be downloaded directly to the HDK. Users can choose between Over-The-Air (OTA) and non-OTA firmware. For detailed information, please refer to Table 1-1.

Table 1-1. ESP8266 FW

Binaries	Compulsory or optional	Description	Non-OTA	ОТА
esp_init_data_default.bin	Compulsory	Default system parameters provided in SDK.	<b>✓</b>	<b>✓</b>
blank.bin	Compulsory	Default system parameters provided in SDK.	<b>✓</b>	<b>✓</b>
eagle.flash.bin	Compulsory	Main program compiled from SDK.	<b>✓</b>	×
eagle.irom0text.bin	Compulsory	Main program compiled from SDK.	<b>Ø</b>	×
boot.bin	Compulsory	Bootloader provided in SDK.	X	<b>✓</b>
user1.bin	Compulsory for first usage	Main program compiled from SDK.	×	V
user2.bin	Used in firmware upgrade	Main program compiled from SDK.	×	<b>✓</b>

#### Notes:

- For the contents of SDK, please refer to Chapter 3, "Preparing the Software".
- For SDK compilation, please refer to Chapter 5, "Compiling the SDK".
- For the addresses of binaries in the flash, please refer to Chapter 4, "Flash Maps".

# 1.5. ESP8266 Toolkit

# 1.5.1. Compiler

Linux OS is required to compile the ESP8266 SDK. When using Windows OS, we recommend VirtualBox as the virtual machine for ESP8266. In order to simplify the compilation procedure, we have installed the compiling tools on the virtual machine. Users can directly compile the ESP8266 SDK by importing the ESP8266 compiler (OVA image) into the virtual machine.

### 1.5.2. Firmware Download Tool

The ESP8266 DOWNLOAD TOOL is the official firmware download tool developed by Espressif. Users can download multiple binaries to the SPI Flash of the ESP8266 mother board (ESP-LAUNCHER or ESP-WROOM-02) at the same time according to the actual compilation mode and flash size.

# 1.5.3. Serial Port Debug Tool

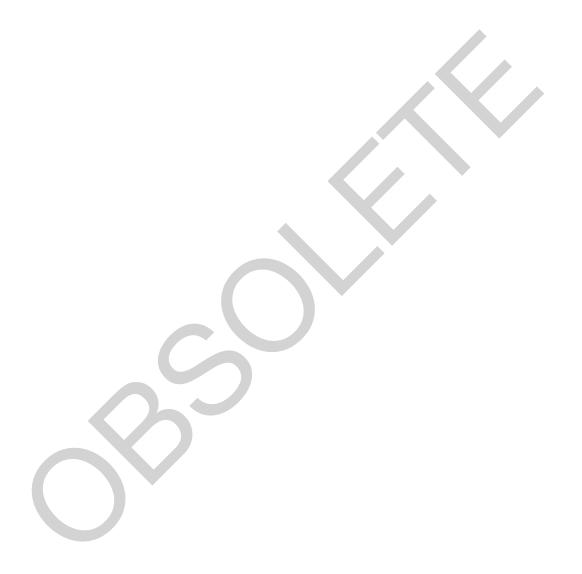

The serial port debug tool can be used to directly communicate with the ESP8266 module over a standard RS-232 port. For PCs that do not have a physical serial port, a virtual comport (USB-to-serial converter) can be used.

Users may directly input commands into the terminal and view or record responses in real time.

We recommend CoolTerm (for Windows and Mac OS) and Minicom (for Linux OS) as the serial port debug tool.

# Preparing the Hardware

Depending on whether the ESP-LAUNCHER or the ESP-WROOM-02 is used, users will need either of the hardware mentioned in Table 2-1 below:

Table 2-1. Hardware Preparations

# **ESP-LAUNCHER** ESP-WROOM-02 • 1 × ESP-WROOM-02 1 × ESP-LAUNCHER 1 × USB-to-TTL converter (FT232R recommended) 1 × USB cable • 6 × Dupont lines 1 × soldering tool suite OR

1 × PC with pre-installed Windows OS

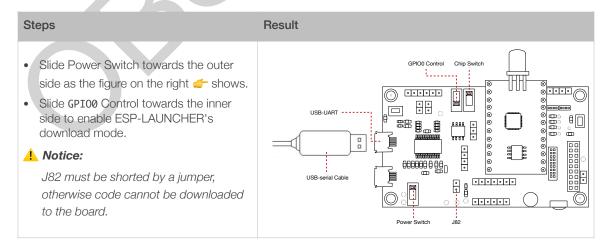

### Notice:

The ESP8266 Wi-Fi module needs a 3.3V power supply and may draw a minimum current of 500 mA.

#### **ESP-LAUNCHER** 2.1.

- 1. Connect PC to the USB-UART interface of ESP-LAUNCHER using the USB cable.
- 2. Set ESP-LAUNCHER to download mode.

3. Connect the USB-to-TTL converter to the PC.

#### Note:

Make sure that the proper driver for the USB-to-TTL converter is installed and recognized by the PC.

- 4. Power on ESP-LAUNCHER by sliding the Power Switch towards the inner side.
- 5. Power on the chip by sliding the Chip Switch towards the outer side.
- 6. Download firmware to flash with the ESP8266 DOWNLOAD TOOL.

#### Note:

On how to download firmware, please refer to Chapter 4, "Flash Map" and Chapter 6, "Downloading the Firmware".

- 7. After downloading, slide the GPI00 Control towards the outer side to enable ESP-LAUNCHER's working mode.
- 8. Power on the chip again with the Chip Switch and the chip will read and run programs from the flash.

# 2.2. ESP-WROOM-02

1. Lead out the pins of the ESP-WROOM-02, as shown in Table 2-2.

Pin Pin status **Figure** ΕN Pull up 3V3 3.3V power supply (VDD) I015 Pull down UART download: pull down; I00 TOUT Flash boot: floating/pull up RST GND **GND** RXD Receive-end in UART download RXD GND 104 Transmit-end in UART download; TXD floating/pull up

Table 2-2. ESP-WROOM-02 Pins

2. Connect ESP-WROOM-02 to the USB-to-TTL converter, using Dupont lines, as shown in Figure 2-1.

Espressif 6/28 2022.08

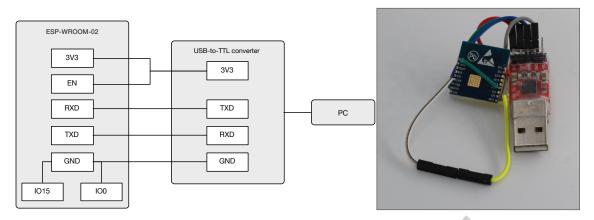

Figure 2-1. ESP-WROOM-02 Download Mode

- 3. Connect the USB-to-TTL converter to the PC.
- 4. Download firmware to flash with the ESP8266 DOWNLOAD TOOL

### Note:

On how to download firmware, please refer to Chapter 4, "Flash Maps" and Chapter 6, "Downloading the Firmware".

- 5. After downloading, switch ESP-WROOM-02 to working mode. Set 100 as floating or pull-up.
- 6. Power on ESP-LAUNCHER again and the chip will read and run programs from the flash.

#### Notes:

- 100 is an internal pull-up pin.
- For more information on ESP-WROOM-02 hardware, please refer to ESP-WROOM-02 Datasheet.

# 3. Preparing the Software

# 3.1. Non-OS SDK

Users can download the non-OS SDK (including application examples) from: http://www.espressif.com/en/support/download/sdks-demos? keys=&field\_type\_tid%5B%5D=14.

Figure 3-1 shows the directory structure of the non-OS SDK.

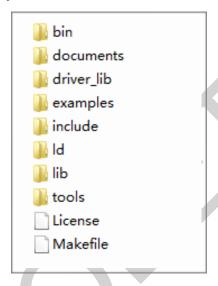

Figure 3-1. Non-OS SDK Directory Structure

- **bin**: compiled binaries to be downloaded directly into the flash.
- documents: SDK-related documents or links.
- driver\_lib: library files that drive peripherals, such as UART, I2C and GPIO.
- examples: sample codes for secondary development, for example, IoT Demo.
- *include*: header files pre-installed in SDK. The files contain relevant API functions and other macro definitions. Users do not need to modify them.
- Id: linker scripts. We suggest users not modifying them without any specific reasons.
- lib: library files provided in SDK.
- *tools*: tools needed for compiling binaries. Users do not need to modify them.

# 3.2. RTOS SDK

Users can download RTOS SDK and its application examples from:

 RTOS SDK <u>https://github.com/espressif/ESP8266\_RTOS\_SDK</u>

Table 3-2 shows the directory structure of the RTOS SDK.

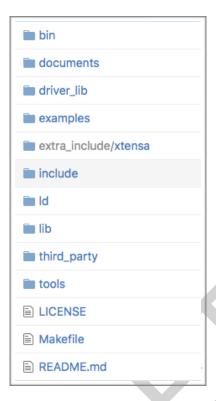

Figure 3-2. RTOS SDK Directory Structure

- bin: boot and initialization firmware.
- documents: ESP8266\_RTOS\_SDK files.
- *driver\_lib*: sample codes of drivers.
- examples: sample codes for Espressif's application programs.
  - **openssl\_demo**: sample codes of the openssl API function.
  - project\_template: sample codes of project templates.
  - smart\_config: sample codes of SmartConfig.
  - **spiffs\_test**: sample codes of the spiffs file system function.
  - websocket\_demo: sample codes of web socket.
- *include*: header files of ESP8266\_RTOS\_SDK, including software interfaces and macro functions for users to use.
- *Id*: link files used when compiling; users do not need to modify them.
- lib: library file of ESP8266\_RTOS\_SDK.
- *third\_party*: third-party library of Espressif's open-source codes, currently including free RTOS, JSON, lwlP, mbedTLS, noPoll, OpenSSL, spiffs, and SSL.
- *tools*: tools needed for compiling binaries; users do not need to modify them.

# 3.3. ESP8266 Toolkit

# 3.3.1. Compiler

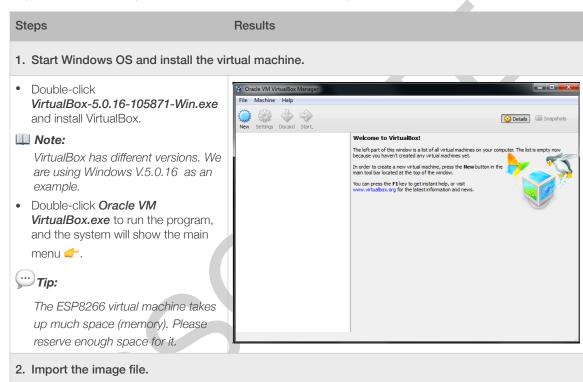

Please download VirtualBox from: <a href="https://www.virtualbox.org/wiki/Downloads">https://www.virtualbox.org/wiki/Downloads</a>.

Note:

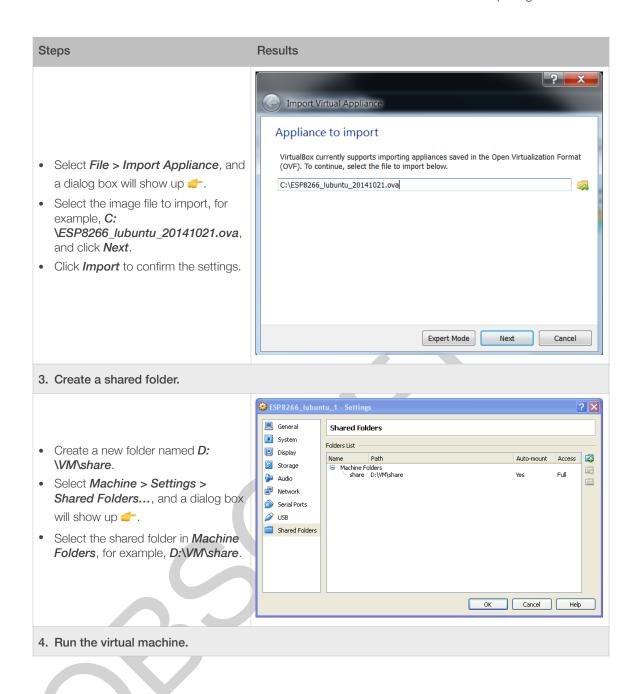

Please choose the right version of VirtualBox according to the host machine's OS.

Please download the compiler *ESP8266\_lubuntu\_20141021.ova* from:

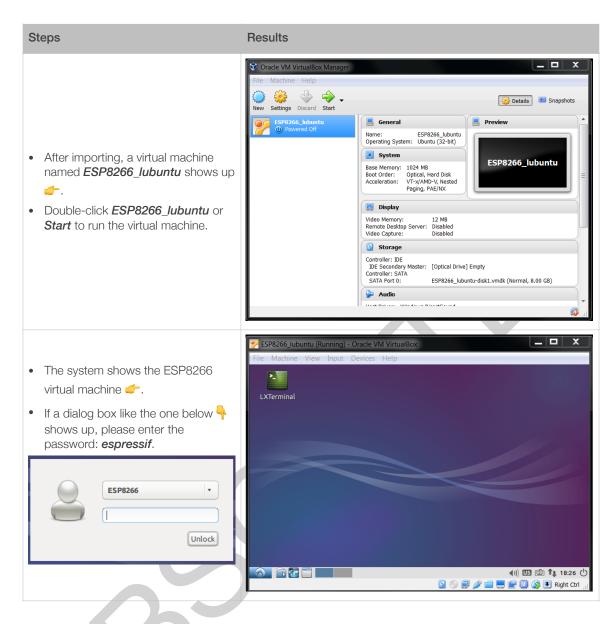

http://downloads.espressif.com/FB/ESP8266\_GCC.zip

### 3.3.2. Firmware Download Tool

Please download the ESP8266 DOWNLOAD TOOL from:

http://www.espressif.com/support/download/other-tools.

# 4.

# Flash Maps

This chapter provides the flash maps for OTA firmware and non-OTA firmware in flash memories with a different capacity. Users can modify the map as needed.

Figure 4-1 shows the flash maps for the two different types of firmware.

#### Non-FOTA

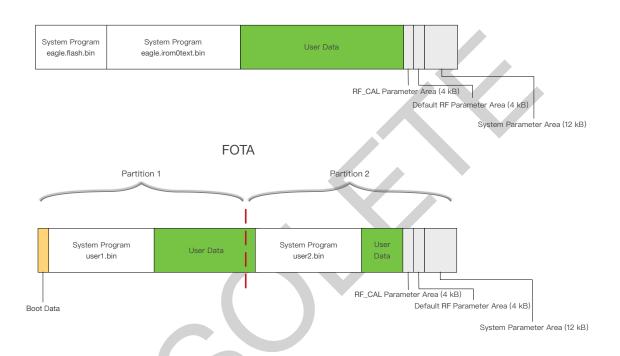

Figure 4-1. Flash Maps

#### Note:

For ESP8266 firmware, please refer to Section 1.3, "ESP8266 FW".

- System Program: This area stores the firmware necessary for the system to run.
- *User Data*: If the system data do not take up all the flash memory, the remaining area can be used to store user data. It is recommended that the user reserve at least 12 KB in the user data area to store user parameters.
- **RF\_CAL Parameter**: The system automatically stores the calibrated RF parameters in this area.
- Default RF Parameter: Download esp\_int\_data\_default.bin in this area to store the default RF parameters.
- System Parameter Area: This area stores the system parameters.
- Boot Data: It is located in Partition 1 of the FOTA firmware, and stores boot data.

#### Notes:

- Each sector of the flash is 4 KB.
- For detailed download addresses, please refer to the following sections...

### 4.1. Non-OTA

## 4.1.1. Flash Map

Users can change the limit by modifying ESP8266\_NONOS\_SDK/Id/eagle.app.v6.Id.

Users can modify the len field in irom0\_0\_seg, as shown in Figure 4-2 (red rectangle).

The location of *irom0.text* varies across different versions of SDK. Users must consult the *eagle.app.v6.ld* file and ensure that they are downloading *eagle.irom0.text.bin* to the correct offset in the flash. The address in the blue rectangle marks the location of *eagle.irom0.text.bin* in the flash.

Figure 4-2. Location for irom0.text

Table 4-1 shows the storage limits of eagle.irom0text.bin with different len values.

Table 4-1	Non-OTA	Flash Man	(unit: KR)

Flash capacity	eagle.flash.bin	eagle.irom0text.bin	User data	len	RF_CAL parameter	Default parameter	System parameter
512	≤ 64	≤ 368	≥ 60	0x5C000	4	4	12
1024	≤ 64	≤ 752	≥ 176	0xBC000	4	4	12
2048	≤ 64	≤ 768	≥ 176	0xC0000	4	4	12
4096	≤ 64	≤ 768	≥ 176	0xC0000	4	4	12
8192	≤ 64	≤ 768	≥ 176	0xC0000	4	4	12
16*1024	≤ 64	≤ 768	≥ 176	0xC0000	4	4	12

ESP8266 presently only supports a System Param area of up to 1024 KB.

### 4.1.2. Download Addresses

Table 4-2 lists the download addresses for non-OTA firmware.

Table 4-2. Download Address for Non-OTA Firmware (unit: KB)

Binaries	Download addresses in flash with different capacities								
Dillaries	512	1024	2048	4096	8192	16*1024			
blank.bin	0x7B000	0xFB000	0x1FB000	0x3FB000	0x7FB000	0xFFB000			
esp_init_data_default.bin	0x7C000	0xFC000	0x1FC000	0x3FC000	0x7FC000	0xFFC000			
blank.bin	0x7E000	0xFE000	0x1FE000	0x3FE000	0x7FE000	0xFFE000			
eagle.flash.bin	0x00000								
eagle.irom0text.bin	0x10000								

#### Notes:

- In general, <u>ESP Flash Download Tool</u> can be used to download firmware into flash. It is recommended that the user start from the lower bits when downloading the firmware.
- But for 8 MB or 16 MB flash, please use esptool instead.

# 4.2. OTA Firmware

# 4.2.1. Flash Map

Table 4-3 lists the download addresses for the OTA firmware.

Table 4-3. OTA Flash Map (unit: KB)

Flash capacity	boot	user1.bin	user2.bin	RF_CAL parameter	Default parameter	System parameter	User data
512	4	≤ 232	≤ 232	4	4	12	≥ 0
1024	4	≤ 488	≤ 488	4	4	12	≥ 0
2048 (Partition 1 = 512)	4	≤ 488	≤ 488	4	4	12	≥ 1024
2048 (Partition 1 = 1024)	4	≤ 1000	≤ 1000	4	4	12	≥ 0
4096 (Partition 1 = 512)	4	≤ 488	≤ 488	4	4	12	≥ 3072
4096 (Partition 1 = 1024)	4	≤ 1000	≤ 1000	4	4	12	≥ 2048

Flash capacity	boot	user1.bin	user2.bin	RF_CAL parameter	Default parameter	System parameter	User data
8192 (Partition 1 = 1024)	4	≤ 1000	≤ 1000	4	4	12	≥ 6144
16384 (Partition 1 = 1024)	4	≤ 1000	≤ 1000	4	4	12	≥ 14336

### 4.2.2. Download Addresses

Table 4-4 lists the download addresses for the OTA firmware.

Table 4-4. Download Addresses for OTA Firmware (unit: KB)

	Download addresses in flash with different capacities									
Binaries	512	1024	2	048	4096		8192	16384		
	512	1024	512+512	1024+1024	512+512	1024+1024	1024+1024	1024+1024		
blank.bin	0x7B000	0xFB000	0x1FB000		0x3FB000		0x7FB000	0xFFB00		
esp_init_data _default.bin	0x7C000	0xFC000	0x1FC000		0x3FC000		0x7FC000	0xFFC000		
blank.bin	0x7E000	0xFE000	0x1	FE000	0x3F	FE000	0x7FE000	0xFFE000		
boot.bin		0x00000								
user1.bin			0x01000							
user2.bin	0x41000	0x81000	0x81000	0x101000	0x81000	0x101000	0x101000	0x101000		

### Notes:

- In general, <u>ESP Flash Download Tool</u> can be used to download firmware into flash. It is recommended that the user start from the lower bits when downloading the firmware.
- But for 8 MB or 16 MB flash, please use esptool instead.
- For OTA firmware, users do not need to download user2.bin, but upgrade the firmware via the cloud server.

# 5.

# Compiling the SDK

#### Notes:

- This chapter demonstrates how to compile the SDK by taking **ESP8266\_NONOS\_SDK/examples/ IoT\_Demo** as an example.
- IoT\_Demo defines three types of devices, i.e., LIGHT\_DEVICE, PLUG\_DEVICE and SENSOR\_DEVICE in examples>IoT\_Demo/include/user\_config.h. Users can only configure one device at a time. The default device for configuration is LIGHT\_DEVICE.

# 5.1. Preparations

### 5.1.1. Modifying SDK Files

#### Note:

Users need to modify the SDK files if using the OTA firmware.

- 1. Start Windows OS.
- 2. Modify files in *ESP8266\_NONOS\_SDK/examples/IoT\_Demo/include* according to the flash map.
  - Modify #define PRIV\_PARAM\_START\_SEC in user\_light.h and user\_plug.h.

Modify #define ESP\_PARAM\_START\_SEC in user\_esp\_platform.h.

Table 5-1 lists the modified values.

Table 5-1. Modify the Field Values in the "include" File (unit: kB)

Default					Modified va	lues		
value (512)	512	1024	2048 (512+512)	2048 (1024+1024)	4096 (512+512)	4096 (1024+1024)	8192 (1024+1024)	16384 (1024+1024)
0x3C	-	0x7C	0x7C	0xFC	0x7C	0xFC	0xFC	0xFC
0x3D	-	0x7D	0x7D	0xFD	0x7D	0xFD	0xFD	0xFD

Espressif 17/28 2022.08

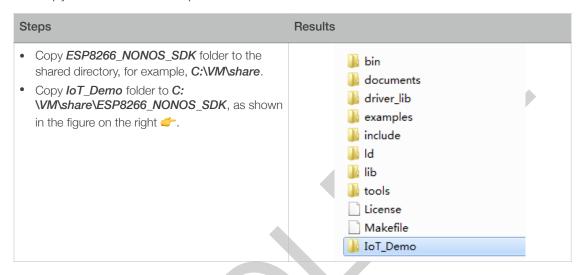

#### Note:

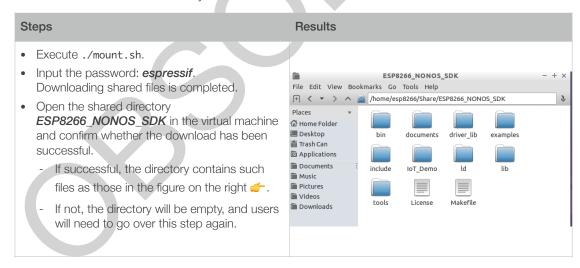

Users need not modify the SDK files if using a 512-KB flash.

### 5.1.2. Downloading SDK Files

- 1. Start Linux OS.
- 2. Run LXTerminal on the desktop of the virtual machine.
- 3. Copy the files to be compiled to the shared folder.

4. Download shared directory.

#### Notice:

If users use the RTOS SDK, please continue with the following steps; if use the non-OS SDK, please skip Step 5.

5. Set the variable PATH to point to SDK and binaries.

export SDK\_PATH=~/Share/ESP8266\_RTOS\_SDK
export BIN\_PATH=~/Share/ESP8266\_RTOS\_SDK/bin

#### Note:

Users can add it to **.bashrc** file, otherwise Step 5 needs to be repeated each time the compiler is restarted.

# 5.2. Compilation

### 5.2.1. Compile ESP8266\_NONOS\_SDK\_v0.9.5 and Later Versions

1. Switch to the /Share/ESP8266\_NONOS\_SDK/IoT\_Demo directory in the terminal.

cd /home/esp8266/Share/ESP8266\_NONOS\_SDK/IoT\_Demo
./gen\_misc.sh

The system shows the following information:

gen\_misc.sh version 20150511

Please follow below steps(1-5) to generate specific bin(s):

2. Select the required options as shown in Figure 5-1

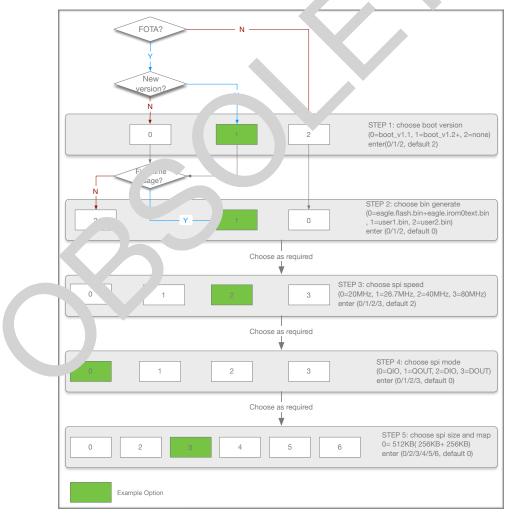

Figure 5-1. Compile SDK

#### Notes:

- The sample options are marked in green. Users can select the right options as needed.
- For OTA and non-OTA firmware, please refer to Section 1.4, "ESP8266 FW".
- Only sdk\_v1.1.0 + boot 1.4 + flash download tool\_v1.2 and higher versions support options 5 and 6 in Step 5.
- After compiling **user1.bin**, execute make clean first to clear the temporary files generated by the last compilation, and then compile **user2.bin**.
- For the flash map in Step 5, please refer to Chapter 4, "Flash Maps".
- 3. After compilation, the generated binaries and the addresses in flash are shown as follows:

```
Generate user1.2048.new.3.bin successfully in folder bin/upgrade.

boot.bin----->0x000000

user1.2048.new.3.bin--->0xSupport boot_v1.2 and +

01000

!!!
```

#### Note:

Users can open the /home/esp8266/Share/ESP8266\_NONOS\_SDK/bin directory and check the compiled binaries.

### 5.2.2. ESP8266\_NONOS\_SDK\_v0.9.4 and Earlier Versions

For ESP8266\_NONOS\_SDK\_v0.9.4 and previous versions, the compilation process is as follows:

- 1. Execute ./gen\_misc\_plus.sh 1 to generate *user1.bin* under the /ESP8266\_NONOS\_SDK/bin/upgrade path.
- 2. Execute make clean to clear previous compilation data.
- Execute ./gen\_misc\_plus.sh 2 to generate user2.bin under the /ESP8266\_NONOS\_SDK/bin/upgrade path.

ESP8266\_NONOS\_SDK\_v0.7 and earlier are non-OTA firmware.

# 6. Downloading the Firmware

# 6.1. Download Procedure

- 1. Start Windows OS.
- 2. Double-click *ESP\_DOWNLOAD\_TOOL.exe* to open Flash tool.

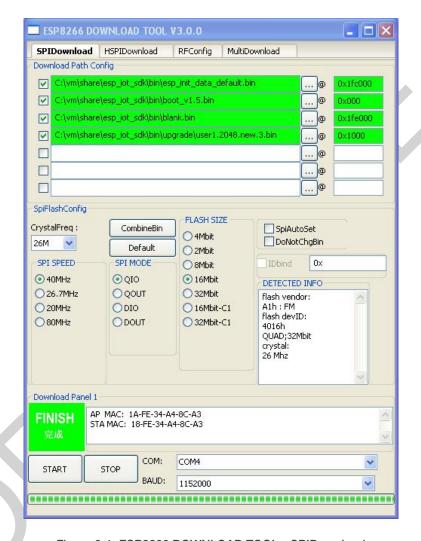

Figure 6-1. ESP8266 DOWNLOAD TOOL—SPIDownload

SPIDownload	For SPI Flash download.
HSPIDownload	For HSPI Flash download.
RFConfig	RF initialization Configuration.
MutiDownload	For multi-mother boards download.

Espressif 21/28 2022.08

- 3. Double-click in *Download Path Config* panel to select the binaries to be downloaded. Set the corresponding download addresses in *ADDR*.
- 4. Configure SPIDownload.

### Note:

The binaries to be downloaded and the corresponding addresses vary with different SPI Flash sizes and actual demands. For details, please refer to Chapter 4, "Flash Maps".

Table 6-1. SPIDownload Configuration

Items	Description	
SPI FLASH CONFIG		
CrystalFreq	Select the crystal frequency according to the crystal oscillator used.	
CombineBin	Combine the selected binaries into <i>target.bin</i> with the address 0x0000.	
Default	Set the SPI Flash to the default value.	
SPI SPEED	Select SPI read/write speed with the maximum value of 80 MHz.	
SPI MODE	Select SPI mode according to the SPI Flash used. If the flash is Dual SPI, select <i>DIO</i> or <i>DOUT</i> . If the flash is Quad SPI, select <i>DIO</i> or <i>DOUT</i> .  A Notice:  If ISSI Flash is used, please refer to Appendix, "Configure ISSI & MXIC Flash QIO Mode".	
FLASH SIZE	Select the flash size according to the flash type.  Note:  16Mbit-C1 refers to 1024+1024 flash map and 32Mbit-C1 1024+1024 flash map as well.	
SpiAutoSet	We recommend not checking <i>SpiAutoSet</i> , but configuring the flash manually as needed.  If users select <i>SpiAutoSet</i> , the binaries will be downloaded according to the default flash map. The flash map of 16 Mbit and 32 Mbit will be 512 KByte + 512 KByte.	
DoNotChgBin	<ul> <li>If users select <i>DoNotChgBin</i>, the flash working frequency, mode, and flash map will be based on the configuration when compiling.</li> <li>If users do not select <i>DoNotChgBin</i>, the flash working frequency, mode, and flash map will be defined by the final configuration of the compiler.</li> </ul>	
Download Panel		
START	Click <b>START</b> to start download. When the download completes, <b>FINISH</b> will appear in the green area on the left.	
STOP	Click STOP to stop download.	
MAC Address	If download is successful, the system will show the MAC addresses of ESP8266 STA and ESP8266 AP.	
COM PORT	Select the actual COM port of ESP8266.	

Espressif 22/28 2022.08

Items	Description
SPI FLASH CONFIG	
BAUDRATE	Select the baud rate of downloading. The default value is 115200.

5. After downloading, turn GPI00 Control on ESP-LAUNCHER to the outer side and power the board on to enable the working mode.

# 6.2. Check Log File

After downloading firmware, users can check the log printed in the terminal by using the serial port debug tool.

Users need to configure the settings of the serial port debug tool, as follows:

Table 6-2. Serial Port Debug Tool Configuration

Items	Configuration Description		
Protocol	Serial port.		
Port number	Set the port number according to the connected device.		
Baud rate	<ul> <li>The baud rate at which the device is running, related to the crystal oscillator.</li> <li>69120 (24 M crystal oscillator)</li> <li>74880 (26 M crystal oscillator)</li> <li>115200 (40 M crystal oscillator)</li> <li>The ESP8266 AT example supports the baud rate of 115200 by default. Users cannot modify it.</li> <li>The ESP8266 IOT Demo example supports the baud rate of 74880. Users can modify it.</li> </ul>		
Data bit	8		
Calibration	None.		
Flow control	None.		

### 6.2.1. ESP8266 IOT Demo

If users download ESP8266 IOT Demo firmware, the system in working mode will show the initialization information including the SDK version, etc. "Finish" means the firmware works properly.

```
SDK version:X.X.X(e67da894)

IOT VERSION = v1.0.5t45772(a)

reset reason: 0

PWM version: 00000003

mode: sta(18:fe:34:a4:8c:a3) + softAP(1a:fe:34:a4:8c:a3)
```

```
add if0
add if1
dhcp server start:(ip:192.168.4.1,mask:255.255.255.0,gw:192.168.4.1)
bcn 100
finish
```

### 6.2.2. ESP8266 AT

If users download the ESP8266 AT firmware, or the default firmware in ESP-LAUNCHER or ESP-WROOM-02, the system in working mode will display "Ready" at the end. Input command "AT" in the terminal and the system will return "OK", which means that the firmware works properly.

#### Notes:

- The baud rate in AT firmware is configured as 115200 manually, however, the default baud rate of ESP8266 is 74880, due to this discrepancy, the system initialization information will be displayed as mojibake. It is a normal phenomenon as long as the system shows "Ready" at the end.
- For more information on AT commands, please refer to <u>ESP8266 AT Instruction Set</u>.

# Appendix—Configuring Flash DIO to QIO Mode

#### ! Notice:

Choose DIO or DOUT mode when downloading, otherwise errors may occur. There is no need to modify binaries in DIO or DOUT mode.

For some 2-line flash (for example, the flash manufactured by ISSI or MXIC), users can configure the flash from the DIO mode to the QIO mode by modifying the first two bytes in blank.bin, as instructed in Table A-1. When booting up, ESP8266 will check the first two bytes of the *blank.bin* file and switch to the QIO mode automatically if the condition set forth in Table A-1 is met.

```
strcut boot_hdr{
                       //low_bit
  char user_bin:2;
  char boot_status:1;
  char to_qio:1;
  char reverse:4;
  char version:5;
                       //low bit
  char test_pass_flag:1;
  char test_start_flag:1;
  char enhance_boot_flag:1;
```

Table A-1. blank.bin Configuration

Option	Description
Without secondary boot loader	Modify to_qio to 0.
With secondary boot loader	Modify use_bin to 0 and to_qio to 0, as well. Modify version according to the current boot version.  Example:
	If users use the secondary <i>boot_v1.5.bin</i> , please modify the first two bytes FF FF to F4 E5.

# Appendix — Learning Resources

# **B.1.** Must-Read Documents

#### ESP8266EX Datasheet

Description: This document introduces the specifications of ESP8266EX, including an overview of the features, protocols, technical parameters and applications. It also describes the pin layout, as well as major functional modules integrated in ESP8266EX (CPU, flash and memory, clock, radio, Wi-Fi, and low-power management). Additionally, it provides descriptions of peripheral interfaces integrated on ESP8266EX, lists the electrical data of ESP8266EX and illustrates the package details of ESP8266EX.

### ESP8266 AT Command Examples

Description: This document introduces some specific examples of how to use Espressif AT commands, including single connection as a TCP client, UDP transmission and transparent transmission, and multiple connection as a TCP server.

#### ESP8266 AT Instruction Set

Description: This document provides lists of AT commands based on ESP8266\_NONOS\_SDK, including user-defined AT commands, basic AT commands, Wi-Fi AT commands and TCP/IP-related AT commands. It also introduces the downloading of AT firmware into flash.

### • ESP8266 Non-OS SDK API Reference

Description: This document lists ESP8266\_NONOS\_SDK APIs, provides an overview of ESP8266\_NONOS\_SDK and introduces the readers to system APIs, TCP/UDP APIs, mesh APIs, application specific APIs, definitions and data structures, and APIs for peripheral interfacing.

FAQ

# **B.2.** Must-Have Resources

#### • ESP8266 SDKs

Description: This webpage provides links to the latest version of ESP8266 SDK and the older ones.

### • Non-OS Sample Code

Description: This webpage provides the sample code for the commonly used functions.

#### • ESP8266 Tools

Description: This webpage provides links to the ESP8266 flash download tools and ESP8266 performance evaluation tools.
